This LED complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

1. How to use the Twistcap

The Lazer Century helmet has a ventilation on demand feature called Twistcap. This system allows the user to control the amount of airflow through the helmet. With the Twistcap in position A, the helmet allows little airflow and has optimized aerodynamic performance. With the Twistcap in position B the helmet allows a lot of airflow and optimized ventilation.

1) To adjust the Twistcap system, lift the Twistcap as in diagram C, rotate 180° and place back onto the helmet. The magnets will keep it attached.
2. How to use the LED light

The Lazer Century helmet has an integrated rechargeable LED light in the rear of the helmet.

1) To operate the light, reach inside the helmet and press the button on the inside indicated in diagram A for three seconds.

To cycle between the light modes, short press the same button. To turn off long press the button for three seconds again.

2. Mode memory function - when you turn the lights on, it lights up in the last lighting mode you used.

Light modes:

1. Still mode
2. Flashing mode
3. Off
3. How to charge the LED light

The LED light in the Lazer Century will need to be charged before use. To do this you will need to remove it from the helmet.

1. First remove the Twistcap (A).
2. Then reach into the helmet and pull the head basket covering the LED away from the helmet. The plastic head basket will detach from the helmet if you pull it hard enough (B).
3. Take a pen (or another similarly sized blunt object) insert it into the hole on top of the helmet and push the LED battery out (C).
4. Now plug the battery in to any USB port using the cable provided (D).

Approximate run times:
Still mode is 5.25 hours.
Flashing mode is 37 hours.
Recharging time is 1.5 hours.
Once recharged you will want to reinstate the LED back into the helmet.

1. To do this, first reposition the LED in the same way it was before you removed it (as shown in diagram A, while pushing the head basket aside).

First push down the left hand side, then push hard on the right hand side of the LED as shown in diagram B.
Thank you for choosing the Lazer helmet. You have made an excellent choice that will help to reinforce your safety while cycling: the sport for which this helmet has been designed. Lazer helmets conform to the strict criteria of international standards.

Wearing a helmet may reduce the seriousness of injuries to the head that may occur during a sports accident. For this reason, it is important to use this protective gear properly.

Instructions for use and care

1) No helmet can protect the wearer against all possible impacts.
2) The helmet is designed to be retained by a strap under the lower jaw.
3) To be effective, a helmet must fit and be worn correctly. To check for correct fit, place helmet on head and make any adjustments indicated. Securely fasten retention system. Grasp the helmet and try to rotate it to the front and rear. A correctly fitted helmet should be comfortable and should not move forward to obscure vision or rearward to expose the forehead.
4) No attachments should be made to the helmet except those recommended by the helmet manufacturer.
5) The helmet is designed to absorb shock by partial destruction of the shell and liner. This damage may not be visible. Therefore, if subjected to a severe blow, the helmet should be destroyed and replaced even if it appears undamaged.
6) The helmet may be damaged and rendered ineffective by petroleum and petroleum products, cleaning agents, paints, adhesives and the like, without the damage being visible to the user.
7) A helmet has a limited lifespan in use and should be replaced when it shows obvious signs of wear.
8) This helmet should not be used by children while climbing or doing other activities where there is a risk of hanging or strangulation if the child gets trapped whilst wearing the helmet.
9) This helmet is designed only for the following activity: cycling, roller skate, skateboard. It is not designed to be used with mopeds or any other type of sport, mechanical or not.

For other and more helmet instructions, please refer to the owner manual included with the helmet.
